Inbound Message Streaming

Consuming more data faster with Kafka

Automated Digital Asset Handling

Enhancing import configurations to handle assets stored in external DAM systems

AI/ML to Enhance Matching Experience

Leveraging AI to simplify the process of creating and tuning performant match rules

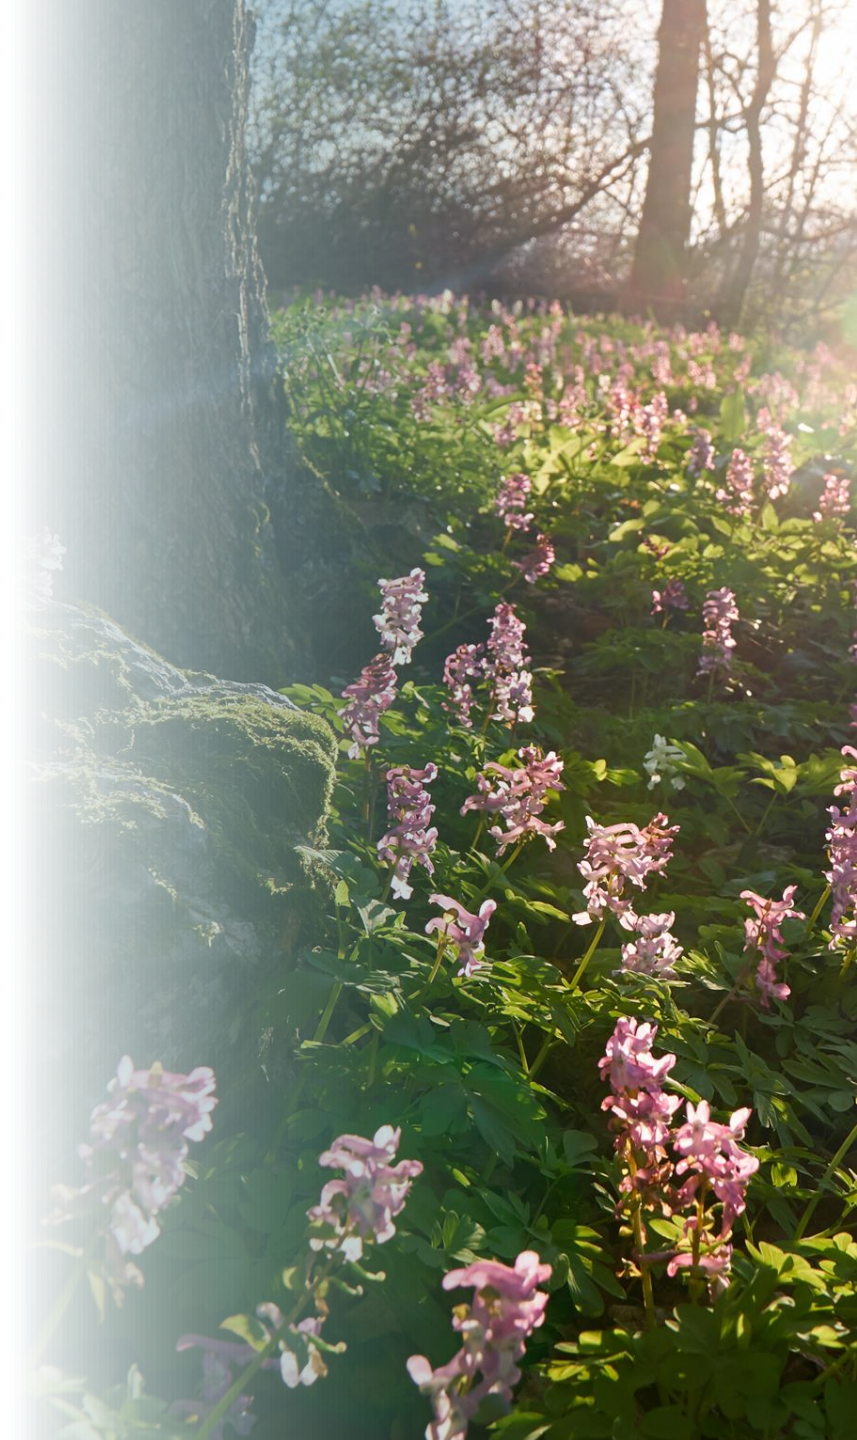

User Journey Enhancements

Further improving and refining onboarding and syndication user journeys

Enhancement Requests

Continuously adapting to the changing needs of the market and of our customers

Inbound Message Streaming

Businesses must be able to exchange data with commonly used technologies in their ecosystem that support scalable and high-volume integrations

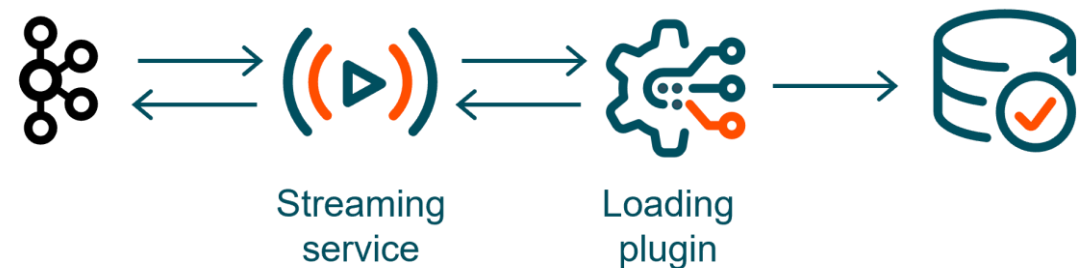

@ADMIN

With the 2024.2 update, we are introducing the first iteration of a new streaming component to onboard more data faster. This Kafka-based solution differs from our existing asynchronous architecture (background process and file-based integration) by taking advantage of true data streaming, consuming individual messages in real time.

This delivery is based on the successful outcome of a recent POC during which we achieved significant performance and volume handling improvements compared to current background process-based imports. We expect this solution to be generally available with 2024.4.

Interested in trying this out?

Please share your feedback!

UPDATE NOTES

Included in Base ←

Configuration Management – Impact Analysis Improvements

Managing continuous development and configuration across multiple environments can be complicated, cumbersome, and error prone

@ADMIN

Triggered by a customer need to manage and safely move configuration changes across STEP systems (data model, workflows, business rules, etc), the first phase of this project was delivered with [2023.3](#). With [2023.4](#), the second phase focused on integration with an external Version Control System (Git).

With 2024.2, prior to installing a change package, we are now supporting the Administrator users in better predicting the impact, and reducing the risk, of an update to a STEP configuration. In a user-friendly experience, the system provides an overview of all changes in a change package, anticipates installation success for each item and identifies which items will require manual installation.

The screenshot displays the 'FullConfig' impact analysis results for a change package. The interface includes a left-hand navigation pane with sections like 'System Setup', 'Bookmarks', and 'STEP Workflow'. The main content area shows a table of items with columns for 'Before Install', 'Install Preview', 'Current', 'Included', and 'Instruction'.

Automated Digital Asset Handling

With digital assets managed in external systems, PIM customers need an easy and flexible integration to handle product-to-asset references

@ADMIN,
@BUSINESS USER

STEP customers who want to automate the management of digital assets in an external DAM solution, need a seamless integration.

With the 2024.2 update, we are addressing this market challenge head-on by optimizing import configurations in the asset importer to automatically handle assets stored in external DAM systems. This ensures creation and update of assets, linkage to products through naming conventions or metadata as well as continuous handling of updates from the DAM via REST APIs. We are also introducing a powerful pre-processor for data adaptability. The increased flexibility and near real time updates will reduce manual effort and will help speed up the business process.

UPDATE NOTES

UPDATE VIDEO

CONFIGURATION VIDEO

Included in Base ←

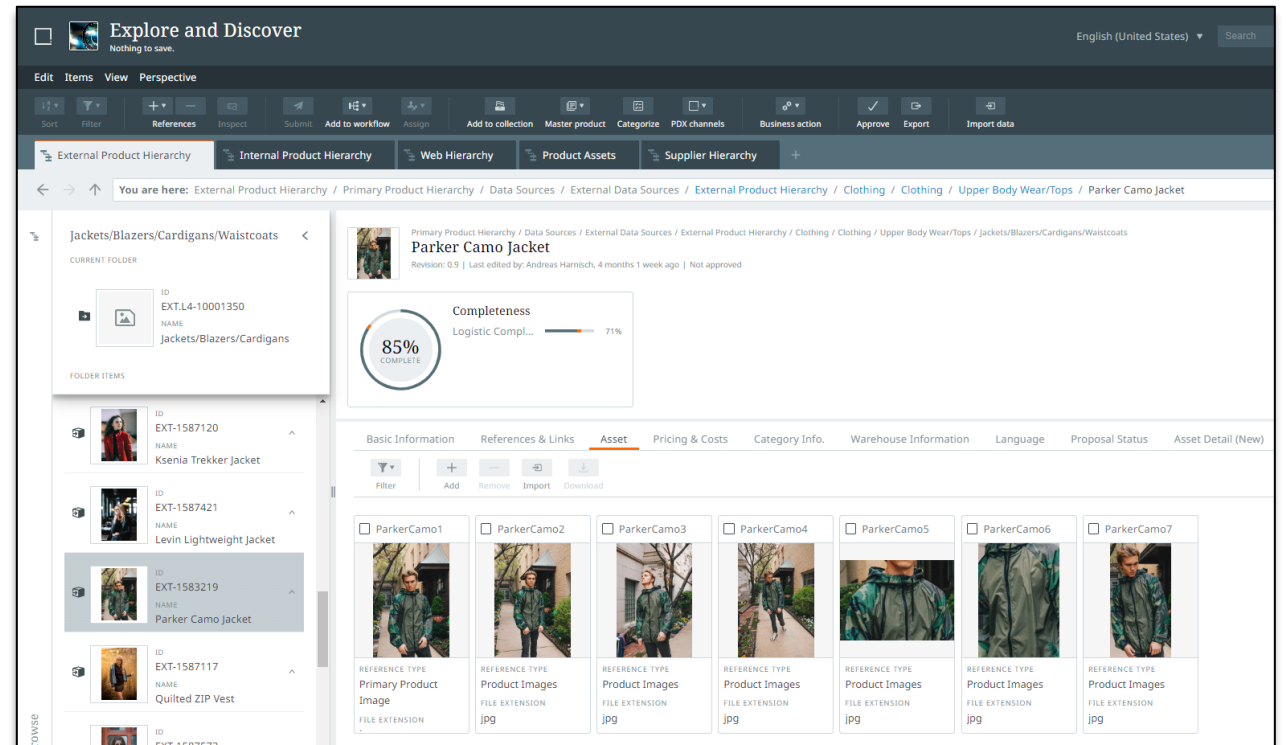

Instrument UI (1/3) – General Updates

Customers need a modern, intuitive user interface supported by a seamless user experience that efficiently guides the user to complete their task

@ADMIN,
@BUSINESS USER

With the 2024.2 update, we are introducing new features to improve the experience and capabilities of Instrument UX:

- Improvements have been made to the single product details view, enhancing the way references and links are handled
- A new view enables users to monitor the translation status of multiple products at a glance, providing a comprehensive overview and further streamlining the product management

UPDATE NOTES

Try out Instrument!

Please refer to your Account Manager ←

Instrument UI (2/3) – Product Data Containers

Customers need to be able to enrich product data which utilizes composite and complex data structures

@BUSINESS USER

In a complex data management landscape where product data is key to ensure trustworthy and accurate data, Product Data Containers can play a crucial role.

Our focus is therefore to extend the capabilities around maintaining and maximizing the outcome of data enrichment within Data Containers.

With 2024.2 we are introducing a simple, yet powerful, reference handling function to view, add and remove these with ease. Additionally, we are enhancing the capabilities to easily find what one is looking for, by adding table filters, to narrow down the view to only show the sought after information.

	Reference	CAS number	Function
<input type="checkbox"/>	2,6-Dimethyl-7-octen-2-ol ×	18479-58-8	* Fragrances
<input type="checkbox"/>	Water ×	7732-18-5	* Water
<input type="checkbox"/>	Water ×	7732-18-5	* Water
<input type="checkbox"/>	Dipropylene Glycol ×	25265-71-8	* Fragrances
<input type="checkbox"/>	Disopropanolamine ×	110-97-4	* PH adjuster

Instrument UI (3/3) – Product Packaging Experience

Enable customers to efficiently manage logistics by providing an overview of their products' packaging hierarchy

@BUSINESS USER

A structured packaging hierarchy can play a key role in optimizing the physical distribution of products and supply chain efficiency. Product combinations, exclusive retail partnerships, bundles and seasonal offerings complicate the landscape even further.

With 2024.2 we are introducing a tailor-made Product Packaging Experience to help you manage your packaging hierarchy. This enables you to see where, what and how a product is included in the hierarchy. This further allows you to view and maintain pallet set-up and configurations to effectively optimize distribution and combinations the product is involved in.

Item name	GTIN	Packaging object types	Quantity	Hierarchy level
▼ Packaging hierarchy - Big variety shipper				
▼ Big variety shipper	921733-200	Pallet	1	1
▼ Quaker big chewy choc...	921733-201	Case	24	2

- 4 [Watch the Customer MDM EMGO!](#)

Using AI / ML to Enhance the Matching Experience

Complexities in building performant matching algorithms, growth in data volumes and a conservative approach to merge automation impacts an organization's ability to create, sustain and govern a trusted single version of the truth

@ADMIN,
@BUSINESS USER

Our vision of matching is underpinned by a mantra of MDM made easy –

- Minimize the burden of defining match rules
- Put match tuning in the hands of data owners
- Leverage AI/ML to enhance, automate and improve the matching process

In 2024.2 we have further evolved our matching capabilities within two key initiatives

UPDATE NOTES

1. AI Machine Learning Matchers

CAPABILITY VIDEO

Providing pre trained ML matchers that have captured industry standard and complex matching edge cases. Reduces the skills and effort required to establish a matching algorithm, ensuring faster ROI, better scalability, and easier future maintainability.

In 2024.2 a new version of the Person Name matcher is introduced to improve matching outcomes and reduce matching setup time.

2. Match Recommendations Through Machine Learning

CAPABILITY VIDEO

Match recommendations through ML improve operational efficiencies and productivity. MDM observes and learns from manual duplicate review decisions and provides intelligent match recommendations derived from continuous learning.

In 2024.2 we have improved robustness and scalability of match recommendations through ML.

Available with the Customer Domain and Supplier Domain license ←

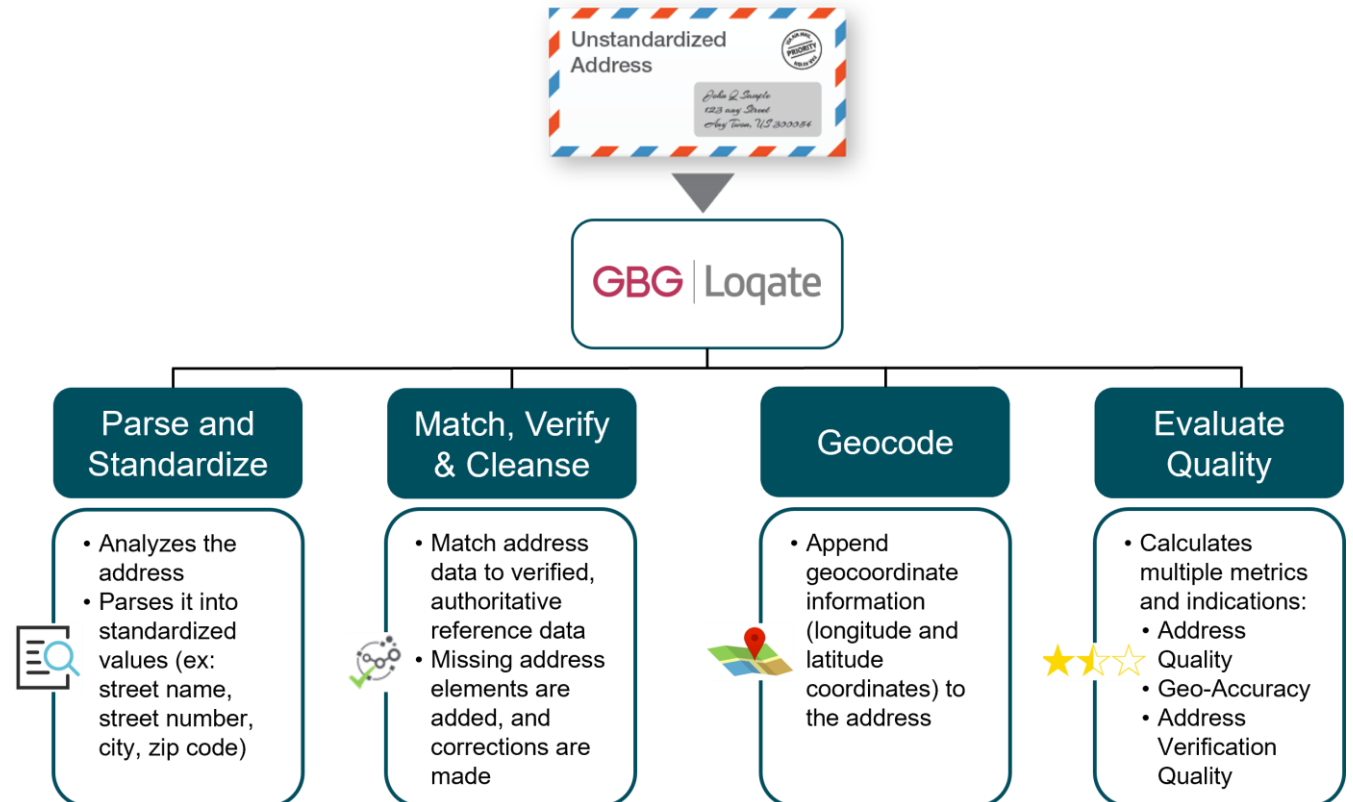

Loqate Cloud Address Verification Update

A Customer MDM solution is of little value unless it contains accurate, verified and up to date customer contact data

@BUSINESS USERS

Stibo Systems continues to partner with the industry leading global address solution provider, Loqate, and through our pre-built connector, we support address verification and cleansing services out of the box.

With 2024.2 we have updated the connector to use Loqate's latest cloud API. This removes the risks associated with staying with legacy APIs and leverages Loqate's new AI address parser, which provides an uplift in verification rates and performance. Any Loqate Cloud API calls will seamlessly be made through the new API once you update to 2024.2.

Optional Add-On for Customer, Supplier or Location Domains ←

User Journey Enhancements

To syndicate and onboard product data vendors and retailers need a toolkit that empowers them to execute their business objectives quickly and easily

@BUSINESS USER

To speed up time-to-market, brands need an enterprise tool that will simplify and accelerate their operations, minimizing time spent on repetitive actions and maximizing the outcome for the business.

In the 2024.2 update, we are delivering a variety of improvements to our user journey:

- ability to filter by last updated date range (screenshot)
- unlimited product export from channels to spreadsheets
- search by any attribute in direct and onboarding channels
- flexibility to apply conditions on complex-to-flat attribute mappings

UPDATE NOTES

Migration to MongoDB

Businesses need a scalable tool that supports them as they grow

@ADMIN

As the world of commerce continues to grow, the expectations for speed and volume across business and customers continues to accelerate as well. Businesses need their enterprise tools to support their mission critical operations and scale to meet their requirements.

In the 2024.2 update, we are migrating to a new database technology that will allow PDX to continue to scale as our customers grow their own businesses.

Working at Scale - Flags and Filters

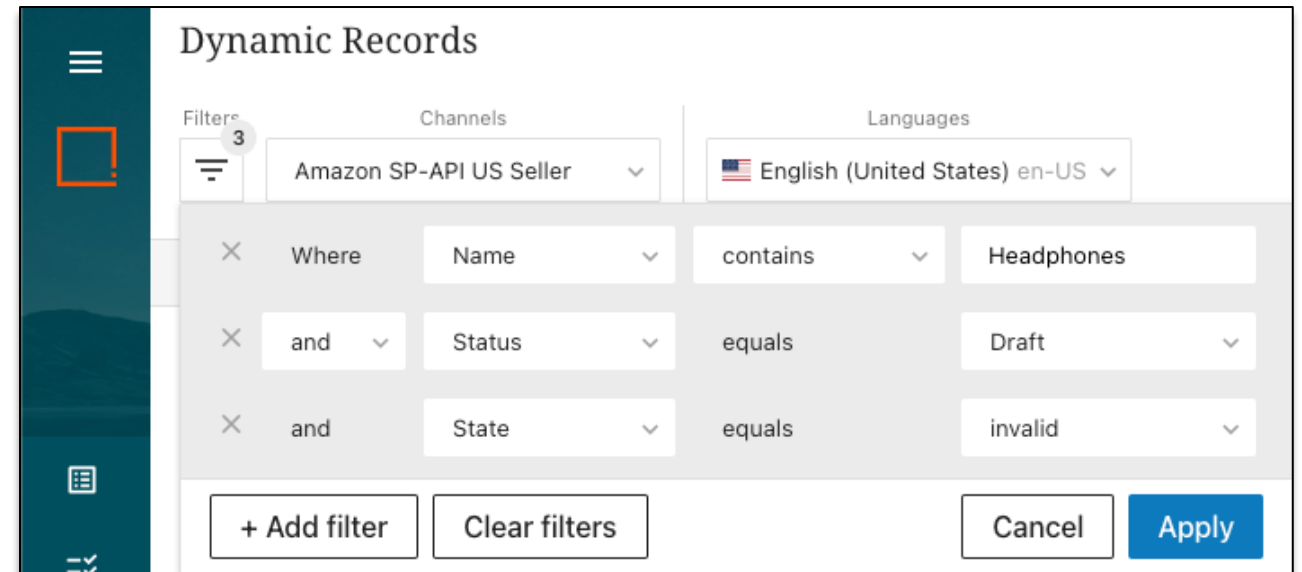

Manufacturers and CPGs struggle to create and maintain below-the-fold content for their large product assortments as current tools are not scalable enough

@BUSINESS USER

Managing enhanced content for a large product assortment requires several tasks to be undertaken to successfully add it to the product detail pages, such as content top-off and final approval before publication.

In the 2024.2 update, we've added the capability to flag reviewed content, to provide the transparency necessary to ensure that only high-quality content is sent to retailers.

Furthermore, a variety of new filtering options have been added allowing users to quickly identify relevant Content Records to action.

Available with PDX Enhanced Content license ←

UPDATE NOTES

Dynamic Record Top-Off

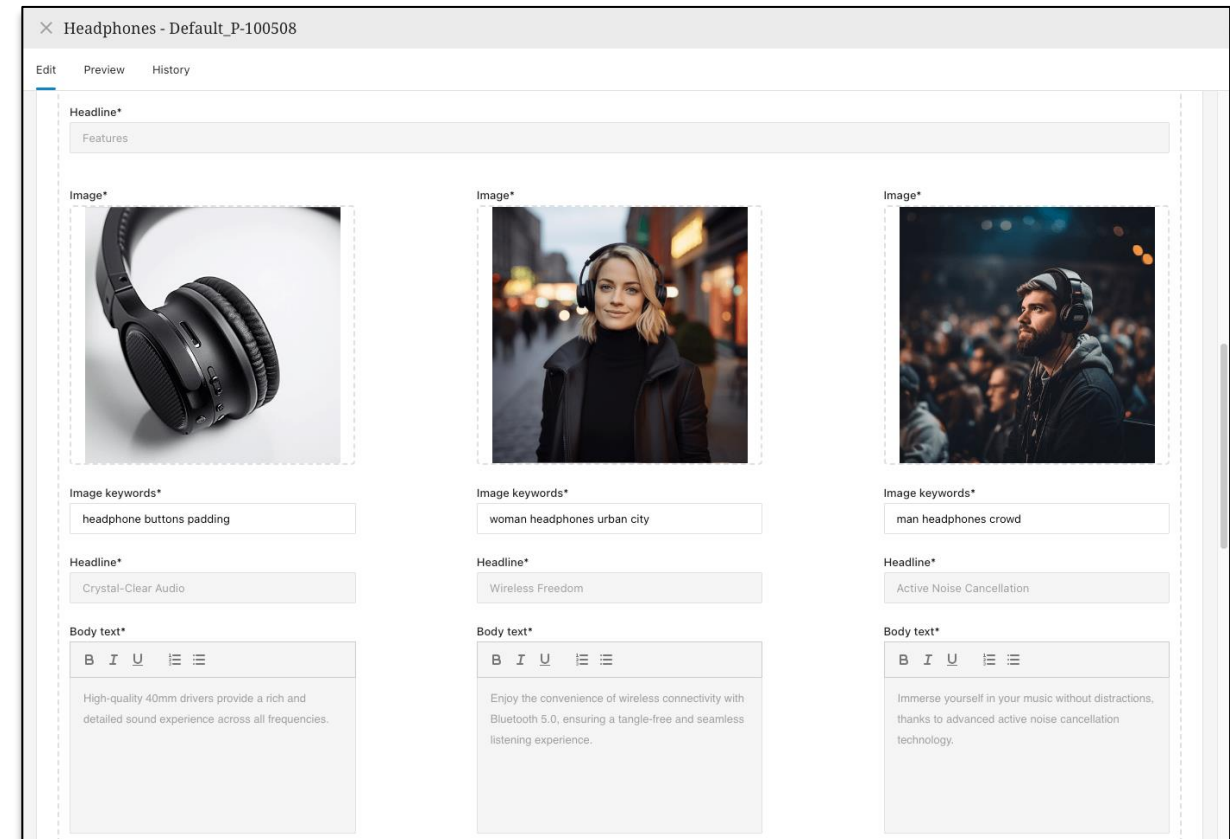

Manufacturers and CPGs struggle to create and maintain below-the-fold content for their large product assortments as current tools are not scalable enough

@BUSINESS USER

Although templates can be used to create publication-ready content for a given channel, this may not be the final step on the automation journey, as many brands discover new data requirements when publishing enhanced content.

In the 2024.2 update, users can now flag parts of a template as manually maintained, allowing content to be specified for each of the Dynamic Records in cases where upstream data is missing.

This enables brands to maximize the automation of their content creation process and increase individual productivity as new master data becomes available, further decreasing operational costs and time-to-market.

Available with PDX Enhanced Content license ←

Enhancement Requests

Enhancement Requests

Businesses need an MDM solution that supports them in their operational agility and which adapts to changing needs

Enhancement Requests (ERs) allow us to continuously adapt to the changing needs of the market and our customers. Find here some of the ERs that are delivered with 2024.2:

1. The System Setup selector is now available in Mapping when exporting Classifications, which is needed if you want to export attribute meta data for attributes linked to classifications.

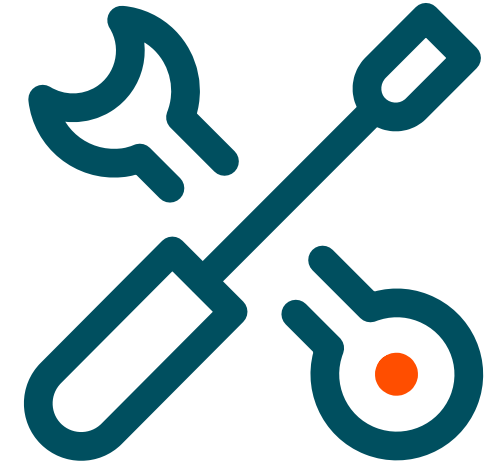

UPDATE NOTES

2. In the current MDM landscape where maintaining and tracking changes on hundreds of thousands of product datasheets is required, we aim to make this task easier by bringing Automated Datasheet Creation to the market. This comes to fruition by monitoring product data changes, and automatically creating or updating standardized datasheet PDF files, following a pre-configured template-based approach. The automatically created file will hereafter be auto-classified and linked together with the appropriate product.

How to Update

First Step to Updating

Have you seen something that could benefit your customer? Are they ready to update and to experience the full potential of 2024.2? Here is the first step to get them started:

- **SaaS customers**

Use the SaaS Self-Service UI* to create an Update Preview Sandbox and/or update one of your existing environments

- **On-Premise customers**

Please reach out to your Account Manager

*The Self-Service UI is available to all our customers on our latest SaaS platform

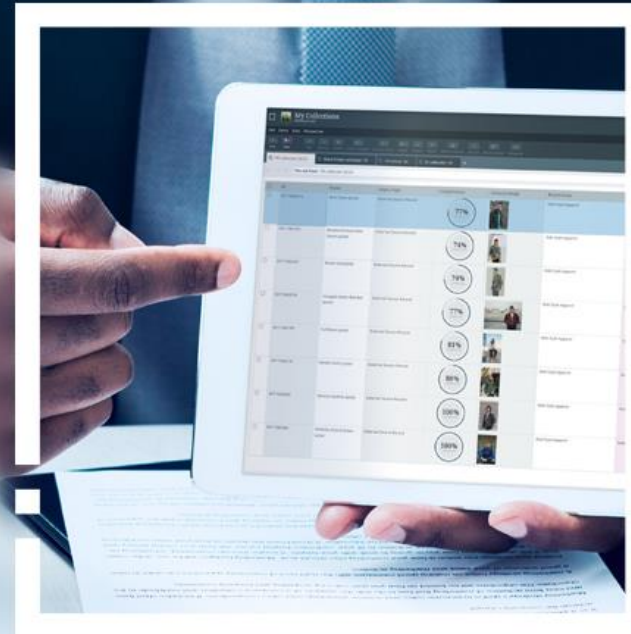

Benefits of Updating

When was the last time I updated? What version am I currently running on? Is my version still supported*? Why should I update?

If your customers are looking for good reasons to update, please find below a few pointers so they don't miss out! And remember, updates are made easy with SaaS!

- Get the latest and greatest to **stay ahead of your competition** – update to outdate
- **Improve the user experience and increase both productivity and efficiency** – take advantage of new capabilities and enhancements
- **Stay current** with updates for security and supportability – stay up to date with third-party application versions, latest industry standards and more
- **Support new business initiatives** – best option for expanding the use of the solution and increasing business value
- **Benefit from improved system performances** – bug fixes and enhancements make for an evermore reliable product

2024.2 Update Activities

The official release is scheduled for [Wednesday, June 12](#).

As part of the update process, [Product Showcases](#) and an [Enablement Overview](#) have been delivered. These sessions allow for a deeper dive in our solution both from a business and technical standpoint.

All recordings are available to watch from this deck and can also be found on your [Online Community's 2024.2 Update Page](#)*.

*[Community access](#) is required to watch these recordings.

Stibo Systems Online Community

With our Online Community get exclusive access to a wealth of opportunities:

- Participate in peer-to-peer forums and groups
- Pose questions, provide answers and share your first-hand knowledge
- Connect directly to Stibo Systems' experts to get the latest software updates
- Grow your expertise by building your MDM network
- Share and vote on new ideas
- Follow [2024.2 update communications](#) (download update decks, read update notes, watch update videos and more!)
- Attend our Community Live webinars

*You are a member of our Community?

Appendix - Instrument

Steps to try Instrument

There are a few requirements needed before you can activate Instrument UI:

1. Be on the most recent STEP version (2024.2). Going forward, update to the latest version when available. Instrument updates will not be backported.
2. Have the Elasticsearch license and Elasticsearch server configuration setup. Elasticsearch is included in SaaSv2.
3. Have In-Memory license and setup. In-Memory is included in SaaSv2.

Contact Stibo Systems to determine how best to meet these requirements and get started.

[Click here to browse the 2024.2 Instrument Update Notes.](#)

Enrichment & Digital Asset Management			Integration, API & SDK			Performance, Scalability and Security		
Web UI Designer & Components	Faceted Search	Single/Mass Object Editing	Integration End Points (IEPs)	Background Processes	Data Format & Mapping	Application Server Clustering	OWASP ASVS Compliance	Role-based Privileges
Bulk Update	Filter & Sort	External DAM Adapter	Scripting API	Event/Batch Data Delivery	Scheduling	Load Balancing	Web Security Scanning	User Groups
Cloud Asset Publisher	Analytics Connectors		Event Processor	Business Action Processor	APIs (REST, SOAP, Graph QL)	In-Memory Database	3 rd Party Governance	User Actions
			JDBC Delivery	Generic XML Export Format	Data as a Service	SaaS Self-Service	LDAP Enabler	Single Sign-On
			Amazon SQS Connector	Extension API	MongoDB Adapter			

Product MDM Capabilities (2/4)

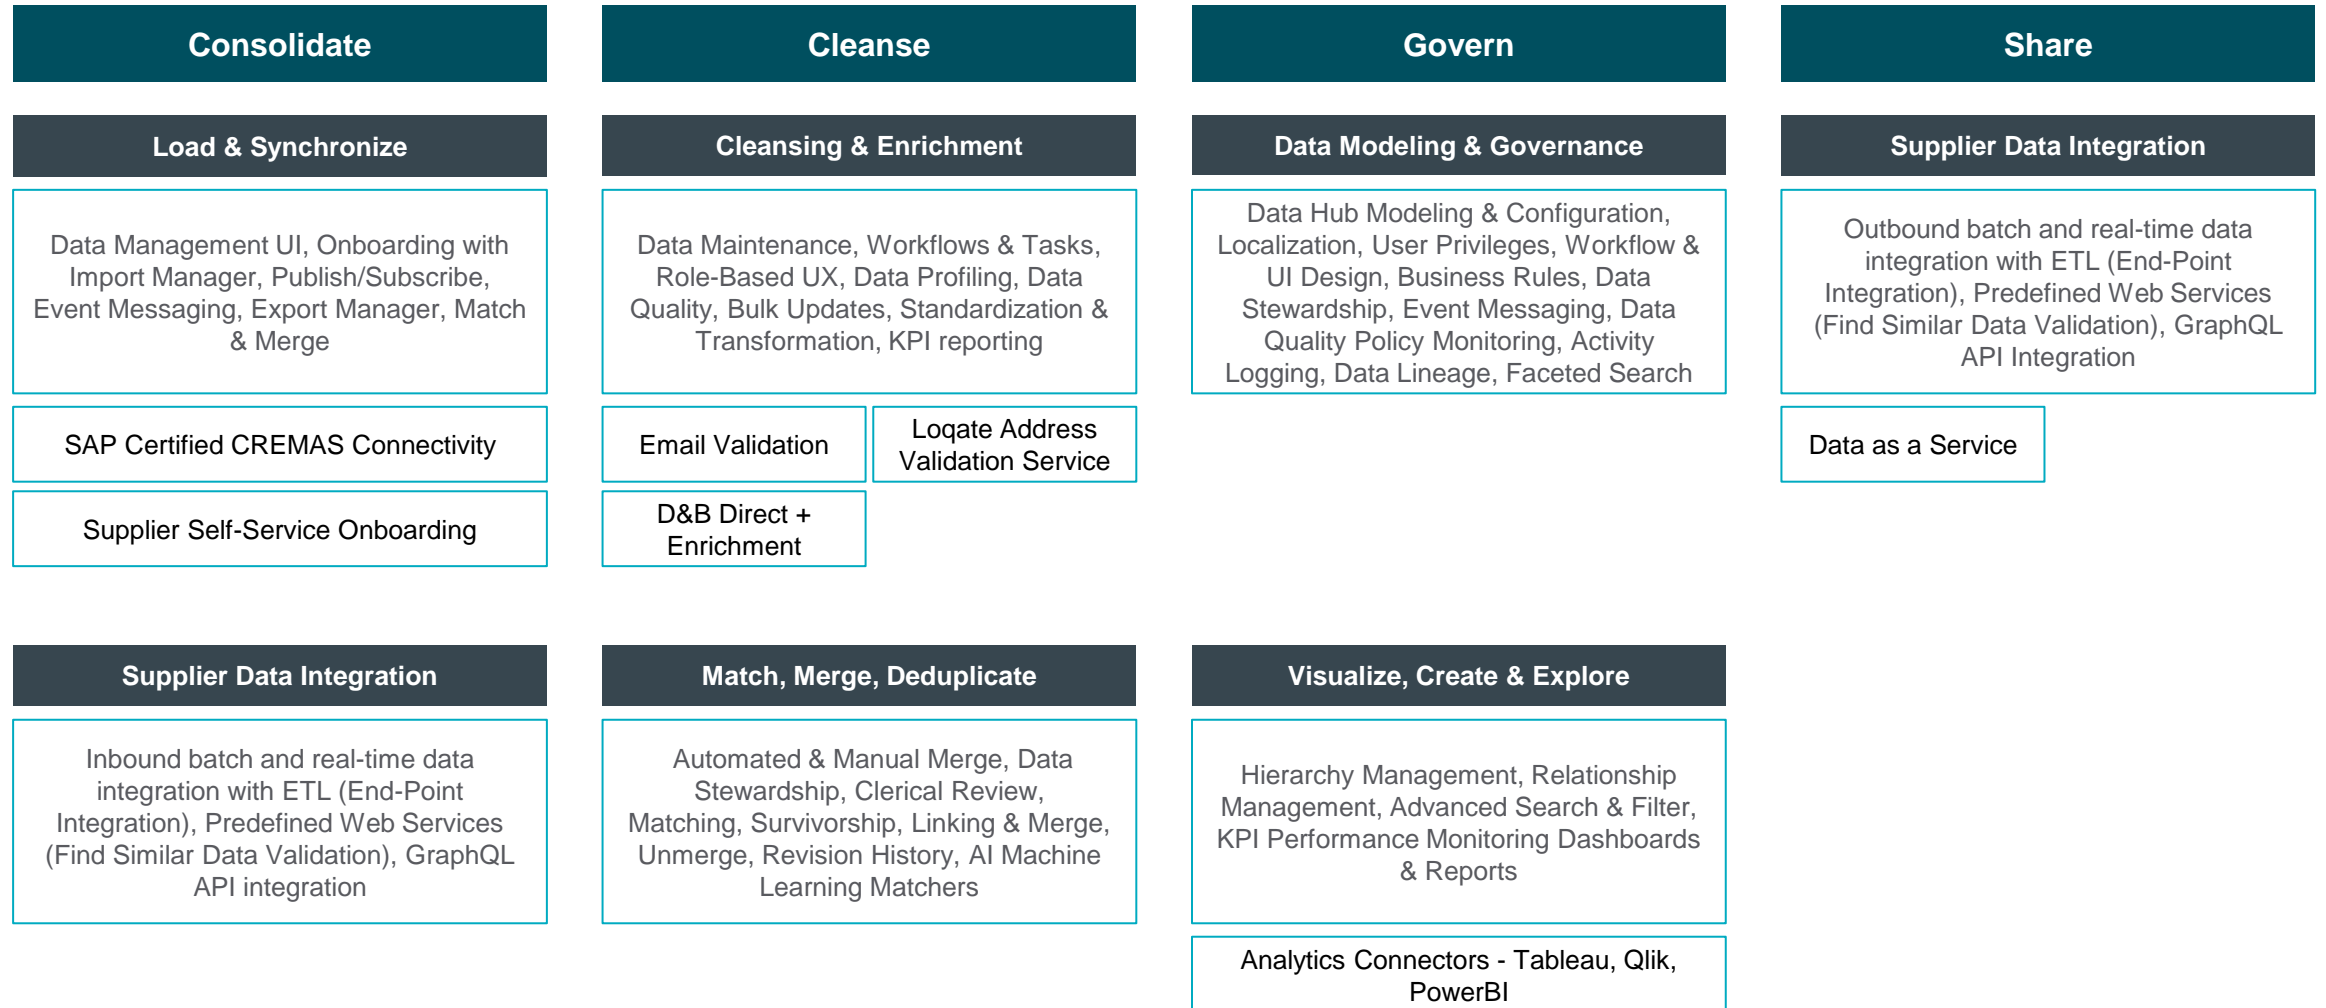

[Back to Initiative Map](#)

Customer MDM Capabilities (3/4)

Initial Configurations: Party Domain Accelerators - including SAP Business Partner focused on common Party use cases

Supplier MDM Capabilities (4/4)

Initial Configurations: Party Domain Accelerators - including SAP Business Partner focused on common Party use cases

Appendix - Browsing Tips

Browsing Tips (1/2)

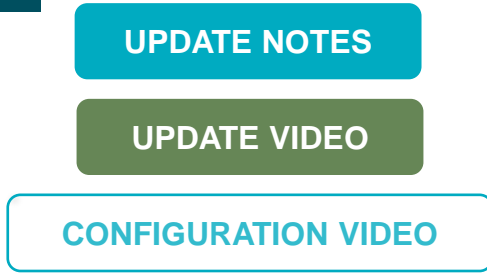

Welcome to the 2024.2 Update Overview Deck. Here are a few tips to help you browse the slides:

1

We've included shortcuts in this deck so you can easily reach the content you want to see. Clicking an initiative tile, a back arrow or an underlined text will take you there in no time!

2

Most of the following slides contain direct links to additional content (webpages, supporting documents*, etc). Colored buttons will indicate hidden content!

3

You're looking for information based on user roles? We've got you covered! Simply search this deck (Ctrl + F or Cmd + F) for @ADMIN, @BUSINESS USER or @DEVELOPER to find the relevant slides for each.

*Update Notes, Update Videos, Configuration Videos, Capability Videos, Product Showcases. [Community access](#) is required to watch videos.

Browsing Tips (2/2)

Our highlight slides contain a lot of information. The example below details the type of content to expect and where it can be found on the slides.

Update Version → 24.2 HIGHLIGHT

Applicable to all Domains ← Which Domain(s) this initiative is applicable to

Initiative Name → **Automated Digital Asset Handling**

Market Problem → **With digital assets managed in external systems, PIM customers need an easy and flexible integration to handle product-to-asset references**

Problem vs Solution → **With the 2024.2 update, we are addressing this market challenge head-on by optimizing import configurations in the asset importer to automatically handle assets stored in external DAM systems. This ensures creation and update of assets, linkage to products through naming conventions or metadata as well as continuous handling of updates from the DAM via REST APIs. We are also introducing a powerful pre-processor for data adaptability. The increased flexibility and near real time updates will reduce manual effort and will help speed up the business process.**

Upcoming Supporting Documents* → UPDATE NOTES | UPDATE VIDEO | CONFIGURATION VIDEO

Which User Role(s) this initiative is mainly addressing → @ADMIN, @BUSINESS USER
